RE: Application by Verizon-New Jersey Inc. for Authorization To Provide In-Region, InterLATA Services in State of New Jersey, Docket No. 01-347 -

Dear Mr. Caton:

This letter responds to requests from the Staff for additional information concerning the testing of line splitting in New Jersey. As discussed in the McLean/Wierzbicki/Webster Declaration, Att. 2, pp. 12-13, Verizon implemented additional OSS functionality on October 20, 2001 to facilitate CLEC ordering of various line splitting scenarios. In particular, Verizon implemented the ability for a DLEC to submit a single Local Service Request (LSR) to add DSL capability to a loop in an existing UNE platform arrangement while re-using the same network elements, including the loop, if it is DSL-capable. Verizon also implemented the ability for a CLEC to convert from line sharing to line splitting using a single LSR, or drop data from a line splitting arrangement and revert back to UNE-P with a single LSR, even though each of these scenarios requires the creation and entry of multiple service orders into Verizon's backend OSS.

As was also discussed in the McLean/Wierzbicki/Webster Declaration, ¶ 137, when Verizon designs and develops new software, it conducts internal tests to verify that it functions properly. For CLEC-affecting releases, the schedule also provides for a 30-day CLEC test period before the software is migrated into production. To facilitate CLEC testing of new software, Verizon established a formal set of test transactions and data – the “test deck” – which is a cross-section of the frequently used pre-order and order scenarios. The test deck is executed in both the test environment and in production to demonstrate the functional match of these environments. Verizon publishes full documentation of the test deck, including transaction inputs, results expected, and results actually obtained when executed. *Id.* at ¶ 144.

The October 2001 release was put into the CLEC test environment on September 23, 2001, and made available for CLEC testing on September 24, 2001. All scenarios in the New Jersey test deck ran successfully for both pre-order and order during the testing period. *Id.* at ¶ 147. The test decks are available on Verizon's Wholesale Services web site at

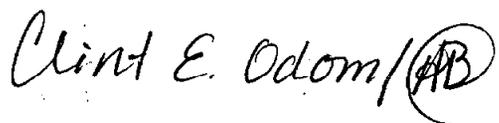

http://128.11.40.241/east/wholesale/html/cd_regression_qbv.htm and
http://128.11.40.241/east/wholesale/html/cd_progression_qbv.htm. *See id.* at ¶ 144.

Attachment 1 to this letter is a copy of the notice sent to CLECs through the Change Management Process that provided them with the Progression Test Deck used to validate the October release of new software into production. Included with Attachment 1 are four line splitting scenarios that were part of the New Jersey Progression Test Deck for the October software release.

Attachment 2 to this letter is a copy of the notice sent to CLECs through the Change Management Process that notified them of the status of the Test Deck transactions in testing following the CLEC test period for the October release. As shown on page 5 of Attachment 2, all line splitting scenarios passed the test. *See also* McLean/Wierzbicki/Webster Decl., Att. 20, p. 7.

Please let me know if you have any questions. The twenty-page limit does not apply as set forth in DA 01-2746.

Sincerely,

Clint E. Odom

Subject: October New Release Testing Status As Of 10/19/01

All-

Verizon migrated code for the October release into the CLEC Test Environment (CTE) Thursday evening and executed the Regression and Progression Test Decks to verify that the code migration was performed successfully.

The attached file contains a status of the Test Deck scenario transactions (in pdf format).

10-19-01 CTE Status.p

Please note: In the pdf file, you may need to zoom in to view the spreadsheet.

As a reminder, the following is a pertinent date for the CLEC Testing period:

10/20/01 Production release

Thank you.
